| 1. INTRODUCTION | 6 |
| 2. ELEMENTARY EXAMPLES | 7 |
| Example 1: Two pins and a piece of string | 8 |
| Example 2: Optical Property of Foci..... | 10 |
| Example 3: Ellipse given semi-major and semi-minor axes..... | 11 |
| Example 4: Hyperbola as a locus of constant differences | 12 |
| Example 5: Optical properties of the Hyperbola | 14 |
| Example 6: Conjugate Hyperbolas..... | 15 |
| Example 7: Parabola in terms of focus and directrix..... | 16 |
| Example 8: Optical Properties of the Parabola..... | 17 |
| Example 9: General Conic via Focus / Directrix..... | 18 |
| Example 10: Polar Line..... | 20 |
| Example 11: Locus of intersections of tangents at the end of chords through a fixed point..... | 21 |
| 3. PARAMETRIC LOCATION | 22 |
| Example 12: Parametric location on an ellipse | 23 |
| Example 13: Conjugate diameters and parametric location | 25 |
| Example 14: Hyperbola Parameter..... | 27 |
| Example 15: Axis Intersections of Ellipse Tangents | 30 |
| Example 16: Axis Intersections of hyperbola tangents..... | 31 |
| Example 17: Conjugate Diameters and hyperbola parameter..... | 33 |
| Example 18: Parametric location on a parabola | 35 |
| 4. ELLIPSE EXAMPLES | 37 |
| Example 19: Locus of intersections of perpendicular tangents | 38 |
| Example 20: Locus of intersection of tangents at the ends of a chord through the focus..... | 39 |
| Example 21: Angle between two tangents..... | 41 |
| Example 22: Tangent direction | 42 |
| Example 23: Locus of midpoints of parallel chords..... | 43 |

101 CONIC SECTIONS EXAMPLES

| | | |
|-------------|---|-----------|
| Example 24: | Angle between supplemental chords | 44 |
| Example 25: | Focal triangle | 45 |
| Example 26: | Locus of Intersection of Tangents defined by the focal triangle..... | 46 |
| Example 27: | Triangle through Center and Focus..... | 47 |
| Example 28: | Triangle formed by tangent at end of diameter, and focal chords | 48 |
| Example 29: | Projecting the focus onto the tangent | 49 |
| Example 30: | Foot of the Normal..... | 52 |
| Example 31: | Central Normal..... | 54 |
| Example 32: | Length of line from center to tangent parallel with focal radius..... | 55 |
| Example 33: | Latus Rectum | 56 |
| Example 34: | Distance to Focus and to focal tangent..... | 57 |
| Example 35: | Locus of intersection of tangent with parallel radius through the center | 58 |
| Example 36: | Quadrilateral circumscribing a central conic..... | 60 |
| 5. | PARABOLA EXAMPLES | 61 |
| Example 37: | Find the canonical form of a parabola..... | 62 |
| Example 38: | Finding the parameter of a parabola..... | 64 |
| Example 39: | Relationship between the lengths of perpendicular tangents..... | 66 |
| Example 40: | Normal and Subnormal | 67 |
| Example 41: | Parabola Tangents | 68 |
| Example 42: | Tangent Normal Axis triangle..... | 69 |
| Example 43: | Tangent Intersection | 71 |
| Example 44: | Line joining tangent intersection to focus | 72 |
| Example 45: | Line from Chord's intersection with Directrix | 73 |
| Example 46: | Circumcircle of three tangent intersections passes through the focus | 74 |
| Example 47: | Intersection of the focus-tangent perpendicular with the line from vertex to point of contact | 75 |
| Example 48: | Intersection of the focus-tangent perpendicular with the horizontal from the point of contact | 77 |
| Example 49: | Orthocenter of the tangent triangle..... | 78 |
| Example 50: | Area of tangent Triangle | 79 |
| Example 51: | Archimedean Triangles and Quadrature of a Parabola..... | 80 |
| Example 52: | Locus of intersections of tangents of given angle..... | 82 |

| | | |
|-------------|--|------------|
| Example 53: | Locus of the foot of the focus-normal perpendicular..... | 83 |
| Example 54: | Locus of intersection of perpendicular normals | 84 |
| Example 55: | Coordinates of the Intersection of two Normals | 85 |
| Example 56: | A theorem of Steiner's | 86 |
| Example 57: | Parametric Quadratic | 87 |
| Example 58: | How to find a parabola's vertex from a chord and the tangents at its ends | 89 |
| 6. | HYPERBOLA EXAMPLES | 92 |
| Example 59: | Hyperbola with given asymptotes | 93 |
| Example 60: | Poncelet Brianchon Hyperbola Problem | 94 |
| Example 61: | 9 Point Circle of a triangle inscribed in a right hyperbola..... | 95 |
| Example 62: | Tangent intersections with asymptotes..... | 96 |
| 7. | SOME LOCI YIELDING CONICS | 98 |
| Example 63: | Locus of incircles..... | 99 |
| Example 64: | Circle through a point with given intercept to a fixed line..... | 100 |
| Example 65: | Circle through a point whose intercept with a given line subtends a fixed angle at that point..... | 101 |
| Example 66: | Intersection of the perpendicular from the center to a tangent with the focal radius | 102 |
| Example 67: | Locus of Intersection of Tangents at the End of Conjugate Diameters..... | 103 |
| Example 68: | Intersection of Normals at ends of Focal Chord | 104 |
| Example 69: | Locus of Intersection of diagonals of a trapezium..... | 106 |
| Example 70: | Locus of center of segment of tangent cut off by two fixed tangents | 108 |
| Example 71: | Newton's Conic Construction | 110 |
| Example 72: | MacLaurin's conic construction..... | 111 |
| 8. | SOME EXAMPLES INVOLVING ENVELOPES..... | 112 |
| Example 73: | Envelope of Hypotenuse of Right Angled Triangle, whose short sides add up to a constant | 113 |
| Example 74: | Envelope of hypotenuse of right angled triangles of constant area..... | 115 |
| Example 75: | A triangle whose vertices traverse fixed lines and two of whose sides pass through fixed points..... | 116 |
| Example 76: | Envelope of Hypotenuse of right angled triangles with constant perimeter | 117 |
| Example 77: | The envelope of the line the product of whose distances from two fixed points is constant | 120 |
| Example 78: | A line at fixed angle to a segment from a fixed point to a fixed line..... | 121 |
| Example 79: | Cross Section of a Hyperboloid..... | 123 |

Example 80: Sides of reflected triangle..... 127

9. CENTERS OF CURVATURE, EVOLUTES AND CAUSTICS.....130

Example 81: Centers of Curvature of an Ellipse 132

Example 82: Radius of curvature in terms of normal and semi-parameter..... 134

Example 83: Centers of Curvature of a Hyperbola..... 135

Example 84: Centers of Curvature of a Parabola 137

Example 85: Focal chord of curvature a parabola 138

Example 86: Construction for center of curvature of an ellipse 140

Example 87: Evolute Equation of a parabola 141

Example 88: Parabola Caustic with incoming light perpendicular to the axis 142

Example 89: Parabola caustic from parallel rays skew to the axis 144

10. SYNTHETIC METHODS147

Example 90: Axis intersections of a conic 148

Example 91: Equation of the conic through five given points 150

Example 92: Family of conics which intersect a given conic in the same points as a pair of lines 152

Example 93: Conic making double contact with a given conic..... 153

Example 94: Conic given two tangents and chord of contact 155

11. PAIRS OR FAMILIES OF CONICS.....156

Example 95: Confocal conics intersect at right angles..... 157

Example 96: A line cutting two similar concentric conics 158

Example 97: Angle between tangents to an inner and outer concentric similar ellipse 160

Example 98: Locus of tangent points to a family of confocal conics 162

Example 99: Point of contact of confocal conic tangent to a family of parallel lines..... 164

Example 100: Point of contact of conic tangent to a family of lines passing through a point on the axis..... 165

Example 101: Locus of centers of conics which pass through a triangle and its orthocenter 167

Example 25: Focal triangle

Given a point on the conic, we create the line joining the opposite ends of the two focal chords. We examine its envelope, as well as the locus of its center. Hint: turn off **Use Assumptions** in the **Math Properties** dialog.

The envelope is clearly an ellipse, from the equation, with width a , what is its height?

Hint: place a point on the ellipse and make it $\frac{-\pi}{2}$ **Point proportional along curve**.
